5. REMARKS AND OTHER RELEVANT INFORMATION:

The requested change in points of diversion are downstream from the existing POD, which diverts water from a side-channel of the Methow River. (See attached map.) When flow in the river drops in late summer, Barkley Irrigating Company uses a push-up dam in the mainstem Methow to keep sufficient water diverted into the side-channel to operate their diversion. This usually happens about August 1 st each year. By changing the POD downstream and pumping directly from the river into the Barkley Canal, there will be no need for bulldozing in the river. The side-channel will also be able to operate in a natural way.
There are no other diversions from the side-channel. Moving the POD downstream will have no negative impacts. Because this change in POD is required prior to August 1, and because there will be only positive impacts from the change, we request Ecology exercise its discretion under POL-1037 and not require advertisement of this change.
